

Hoz Serkany

Full-Stack Product Engineer

Ottawa, Ontario, Canada | Canadian citizen | hozserkany@gmail.com
LinkedIn | GitHub | Portfolio

SUMMARY

Full-stack product engineer delivering web, mobile, backend, and cloud systems from architecture through release readiness. Production experience includes Flutter, TypeScript/Node.js, Next.js, Supabase/Postgres, AWS/GCP, authorization, CI/CD, automated testing, and operator-facing real-time workflows.

TECHNICAL SKILLS

Product Engineering: Flutter/Dart, TypeScript, JavaScript, Node.js, Next.js, React/Redux, Express, REST APIs

Data/Security: PostgreSQL, Supabase Auth, RLS, Realtime, Edge Functions, MongoDB, SQL, RPC

Cloud/Delivery: AWS (ECS, EKS, Lambda, S3), GCP (Cloud Run, Cloud Build, Storage), Firebase Hosting, Docker, GitHub Actions

Quality: Flutter test, Playwright, Vitest, Storybook, pgtap, concurrency testing, CI/CD, technical runbooks

EXPERIENCE

Languages of Life

Full-Stack Engineer (Contract)

Remote

Jun 2026 – Present

- Rebuilt an early Next.js prototype as a cross-platform Flutter app for iOS, Android, and web while retaining and extending its Supabase backend.
- Delivered the multi-role assignment lifecycle for clients, linguists, and admins, including offers, reassignment, time logging, completion gates, Realtime updates, and audit history.
- Enforced server-side authorization through Postgres grants, RLS, lifecycle RPCs, optimistic concurrency, and two-session race-condition tests.
- Built Deno Edge Functions for user provisioning, FCM status notifications, Twilio acceptance messages, and offer alerts; established GitHub Actions gates for client, Edge, RLS, and concurrency tests.
- Deployed staging on Firebase Hosting with hosted Supabase and produced production, UAT, incident-response, rollback, and privacy/compliance runbooks.

Sensofusion

Full-Stack Software Developer

Ottawa, Canada

Sep 2025 – Feb 2026

- Developed a Next.js/Redux command-and-control application and Node.js backend services integrating sensor, mission, telemetry, geospatial, and video data.
- Reduced streamed payload volume by 70% for duplicated notifications and fixed 30+ production bugs.
- Rebuilt Playwright end-to-end tests, expanded Vitest/Storybook coverage, and delivered AWS workloads on ECS, EKS, Lambda, and S3 with Cloudflare routing.
- Supported field deployments, demonstrations, and production ramp-up with cross-functional hardware/software teams.

Sandin Tech Inc.

Founder, Director

Ottawa, Canada

Jan 2023 – Present

- Architect and maintain a Next.js/Express/MongoDB peer-to-peer delivery platform with modular REST APIs, containerized environments, and testing infrastructure.
- Deployed a production pilot on GCP Cloud Run using Cloud Build, Artifact Registry, Cloud Storage, Secret Manager, and service-account IAM.
- Built JWT authentication, geolocation filtering, user verification, trust-based ratings, and video upload/streaming workflows.

MNPS Inc.

Co-Founder & CTO

Ottawa, Canada

May 2026 – Present

- Lead product and technical direction for an incorporated C++17 membrane process simulation company and its industrial-host integration.

Ericsson

Cloud RAN Software Developer (Co-op)

Ottawa, Canada

May 2021 – Apr 2023

- Built embedded Linux messaging software and Jenkins CI pipelines; migrated legacy unit tests from C to C++ and automated post-merge testing.

EDUCATION

Bachelor of Applied Science, Computer Engineering (Innovation Stream), Queen's University

2023
